DETAILED ACTION

1. In view of the Appeal Brief filed on June 6, 2003, PROSECUTION IS HEREBY REOPENED.

To avoid abandonment of the application, appellant must exercise one of the following two options:

(1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,

(2) request reinstatement of the appeal.

If reinstatement of the appeal is requested, such request must be accompanied by a supplemental appeal brief, but no new amendments, affidavits (37 CFR 1.130, 1.131 or 1.132) or other evidence are permitted. See 37 CFR 1.193(b)(2).

Drawings

2. Figures 16-18 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 2625

4. Claim 10 recites the limitation "said second step" in line 3. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-3,6-8,11-13, 21-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Braudaway et al (US 5,530,759).

As to claims 1,6,11 and 21, Braudaway et al disclose an image processing apparatus, comprising: a processor, wherein the processor places bits for describing information different from information of image data obtained by image processing on original image data only in specific bit positions of multiple bits of pixel data only at predetermined positions of said processed image, each of the pixel data being expressed by using multiple bits (column 4, line 60 through column 5, lines 23).

As to claims 2,7,12 and 22, Braudaway et al disclose pixels are dispersed at a plurality of predetermined positions on said image (column 5, lines 5-23).

As to claims 3,8, and 13, Braudaway et al disclose information different from information of said processed image data is information describing the contents of image processing performed on said original image data to obtain said processed image data 9column 5, lines 5-23).

Art Unit: 2625

Claims 23-24 are similarly analyzed and rejected.

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims 4,5,9,10,14 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Braudaway et al in view of Rhoads (US 6,285,776).

As to claim 4, Braudaway et al disclose an image processing apparatus according to claim 1 (see claim 1). However, Braudaway et al fail to disclose information different from information of said processed image data is information describing time when said image processing is performed on original image data to obtain said processed image data.

But, on the other hand, Rhoads in a method for identifying equipment used in counterfeiting discloses information different from information of said processed image data is information describing time when said image processing is performed on original image data to obtain said processed image data (column 2, lines 56-67), in order to address privacy concern when the image data being processed is recognized as corresponding to banknote.

Art Unit: 2625

Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to provide the method of Rhoads with Braudaway et al in order to address the privacy concern.

Claims 5,9-10 and 14-15 are similarly analyzed and rejected.
